

# AM-3-R

## DIN 96x96 multifunction three-phase meter with Rogowski-coils

- DIN 96x96 ultra compact version, only 39 mm depth
- Fully bi-directional four quadrants measurements for all energies and powers
- Main electrical parameters measured and displayed for a cost-effective consumption analysis
- 4 available KITS: 30, 45, 70, 90 cm coil length
- 3 selectable current scales
- Possibility to connect by PT
- Up to 8 MB for data recording
- Possibility to record all energy counters
- Up to 24 parameters selectable among real-time measurements for MIN/AVG/MAX recording
- MODBUS TCP communication by Ethernet port
- Possibility to manage the instrument by web interface
- 2 digital outputs, 1 digital input, 1 analogue output (optional)

### » General features

AM-3-R is an innovative instrument for measuring and recording electrical parameters. It is particularly suitable for consumption analysis and control, with an excellent quality/price ratio.

The connections are very quick and easy, very useful for retrofitting applications on existing switchboards or for energy audit.

AM-3-R is the ideal instrument to establish the measurement points on the plant.

The instrument can communicate through the RS485 serial port by MODBUS RTU/ASCII protocol or through Ethernet port by MODBUS TCP protocol.

Web interface is also available in case of using the instrument with Ethernet port: a very useful function that gives the possibility to manage the instrument by any PC connected on the network.

### » Benefits

- AM-3-R provides fully and accurate information on the load in the measurement point and it allows to calculate the costs of the energy consumption.
- Data read by PC allows to generate consumption profiles, recorded values trend, alarms/events report and costs calculation as well as critical values identification.
- The use of Rogowski coils for current measurement grants a quick installation, particularly on existing plants. In case of changes on the plant, the instrument can be fit for the current consumption without replacing the transducer.
- Available remote firmware upgrade of the instrument.

### » Applications

- Energy audit.
- Monitoring system and energy control.
- Individual machine load monitoring.
- Power peak control.
- Switchboards, gensets, motor control centers, etc.
- Remote metering and cost allocation.
